

Hi

I will get straight to the point, my concern is that you have mentioned and highlighted several times on your brochure the concept of 'Living locally' and 20 min walk for most of our daily needs.

So what is this all really about? Trying to contain a populations with 15min cities? Typical government overreach as was the case with covid and all the bullshit that the government implemented in the name of 'health' which we no know was complete and utter dog shit.

I guess what I as asking is for some sort of truth even though i know you will be probably lie through your teeth.

All this development is contributing to a society controlled by the government where eventually people will be restricted to not leave their post code and will eventually require a permit to enter into another 'zone'. This is all a part of the government real long term strategy I would assume.

By know I am sure you think that I am a conspiracy theorist, which I am not but I think after everything that has happened it is ok and valid to question what is really happening around us.

Apart from the above comments as a resident in officer how will all this development and actually and practically affect where i live?

In terms of

- local traffic
- increased crime in areas with increased population
- are there enough law enforcement at hand to tackle the growth in crimes/break in? (these pigs are useless anyway)
- what are the increased cost to me has a home owner eg rates i pay, will this increase?

I would like an answer for each of the above points in detail.

Don't beat around the bush and be transparent and straight to the point with your responses.

I want to know **all the things** that you haven't mentioned in your "nice little brochure" that can and potentially will affect me as i live here as this employment precinct is being developed.
