
Hi Melissa, our planning team have had a look through your documents and have provided the attached and comments below.

I hope you find this useful?

Please find below some specific feedback on this PSP. I have also attached the strategic plan document that we previously provided back to VPA in 2020.

- **Nbn** proposes to service this precinct from co-located FAN site in Station St, Officer. This will require network pit and pipe connectivity running north to south as development occurs.
- Construction of pit and pipe network along gazetted roads will be important to ensure that the precinct can be serviced in an efficient manner. Any major roads running north-south through the precinct will provide the best path to provide service from the co-located FAN site.
- NBN Co is open to working with the other Utility Service Providers (USPs), governments and other entities to cater for growth in the Precinct. Opportunities may arise to facilitate possible trench sharing opportunities either with Council/Road Authorities or other Utilities. Areas of specific interest are the Princes Freeway crossings on Officer South Rd & Stephens Rd (or any other north-south crossing locations occurring), the high-pressure gas easement running east – west and the electricity transmission corridor located within the precinct.
- **Nbn** would like to get a geospatial version (Mapinfo, KML or similar) of the approved PSP plan, as this will aid **nbn** in analysing the precinct and plan how to service the area.

If you could share with us the geospatial version that would be great please Melissa?

If you have any other questions or issues, please let me know.

Kind regards

Brett Howard
