1141437	<div></div>	I would like to write my submission		Hi Again further to our discussions could I please ask for talks regarding this matter we are land locked between the officer south psp and Cardinia rd The developments need to put fill in to lift up their land to build on that will mean you will have created our land to be in a very low spot at the moment there is properly variations of up to 20cm between our place and the PSP land when developed this will be more like a meter how is that fair and acceptable As a farm it has isolating as We are in no man's land between the ugb and the KWRFPD We have no representation from anyone especially Melbourne water and council We feel like the small people at the bottom of the pile that the big guys can walk all over Giving as added biosecurity risks eg		27 Oct 23 11:03AM

				<p>rubbish dumping, people contact trespasses on property, contaminated water in floods Giving as no security Increased noise from developments and road traffic giving us no liveability In the psp plans Some maps indicate a green buffer zone adjacent to farm land and some do not Page 19 shows it Page 16 shows what looks like roads what's happening there the buffer zone should have wetland and water basins on them Would also like to know how developers are held to account with differences between plan and finished works you need to fix the current water problems with the gum Scrub before starting something new The water basins will still be too small and what do we do of the next 5 – 10 years possibly more with the water problems that have been created from other developments as Melbourne water stated</p>

				<p>the Gum Scrub is already over its capacity This is costing us around \$50,000 a year In a lot the Melbourne water documents there seems to be a lost of assumptions made or it could be me not totally understanding the terminology could i please ask for someone to give me more understanding on all this in the briefing notes</p> <p>Subject: Officer South RORB model Advice it states ." Local Checks have been undertaken for rainfall within the PSP area to confirm RB sizes are adequate but have not been provided to simplify the process" where is the accountability in this all data should be shown please note i have never got involved in any of this before. as it is well out of my depth and because i always thought that the VPA, Melbourne water and council. would have the environment and local land owners' best interest and</p>		
--	--	--	--	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--

				<p>welfare in mind but sadly, the past would tell a different story then that. you may look at this and say its small and not worth your time but it's our life and is big to us i can see this PSP will make our farm unviable and our life even more unlivable look forward to talking more</p>
