I am writing to object to the 4500 houses to be built off east of Aberline. I see Labor's mass immigration is creating huge problems and their solution is to destroy our way of life and standard of

living. That road already is congested around school and busy peak times. With ten thousand people added to that area wow it's going to be so good isn't it. A survey of what the community wants should be done and that development needs to stop immediately till all roads infrastructure etc are completed to accommodate it. Also what are the affects on our net zero goals by building all these houses and people? They'll need food electricity water cars waste disposal etc what about our environment? Where are the good old greenies of the olden days? Beautiful green paddocks now concrete cities. I object to this development and explosion of population to our town it's already unrecognisable and more difficult to get around and access basic necessities. I was in the ED at the hospital the other day and it was bedlam. Bedlam. There's no child care vacancies. The roads are congested and many over run. What about net zero? This has to stop and and now.
